

# Electrical heating of the future

Control your DEVI system from anywhere with just a swipe

DEVI offers you the unique possibility to control your electrical heating systems from a distance. All you need apart from DEVI heating cable systems is a DEVlink™ system on the wall and Danfoss Link™ App on your mobile device.

# DEVlink™ with Danfoss Link™ App control fits most indoor heating solutions:

- both new buildings & renovations
- 1-2 family homes
- Apartments and flats
- Second homes
- Small offices and clinics
- ...and in other cases, please contact your local heating installer

## DEVlink™ put you in control

With DEVlink™ you are in full control of the heating comfort in your home. You can set the preferred heating comfort level day by day, hour by hour, room by room. You can choose one temperature morning, afternoon and evening, when the family is at home. You can lower the temperature 3-4 degrees during nighttime – ideal for a healthy and refreshing sleep. Or you can lower the temperature even more when the family is out of house.

## Danfoss Link™ App – Control your heating system at distance

DEVlink™ is Danfoss Link™ App enabled, meaning that you can control your DEVlink™ heating system via an App on your smartphone.

This opens a whole new world of floor heating control, where you effortlessly control your DEVI heating system. If at home, use the smartphone or the DEVlink™ CC to control. When away from home control the system via your smartphone.

This allows you to react fast e.g. if you decide to come home earlier.

## DEVlink™ is good for your heating economy

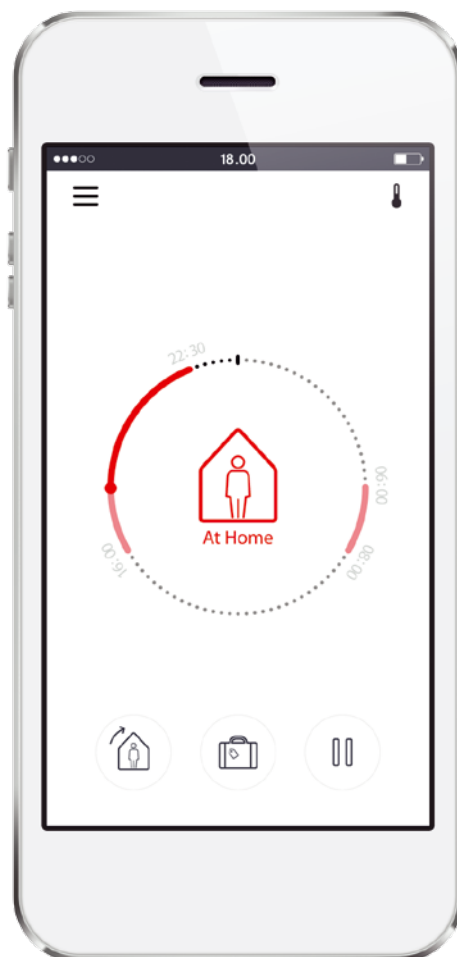

DEVlink™ allows you to save energy while creating an even better indoor climate; comfortable warm during daytime, nice and cool during nighttime. As a rule of thumb, energy consumption is 5% lower for every 1 degree you lower the room temperature, so with DEVlink™ you get the better from both worlds: better comfort and better economy.

## DEVI is the part of Danfoss

DEVI is the part of Denmark's largest industry group, Danfoss. DEVI and Danfoss' engineers have cooperated on creating the Link system that can control both electrical and water based heating systems.

**Try it!**  
Download the  
Danfoss Link™ App

**DEVIlink™ CC** – Central Controller, is the perfect solution for the regulation of electric floor heating both for apartments, family houses and multifamily buildings. All control devices are special designed to be networked as a complete system, with two-way wireless communication. Control heating from one central point

- 'Vacation' function
- Simple user interface
- Color touchscreen
- Weekly heating schedule
- At home mode
- Pause heating
- Control of on/off devices (not via app)
- Integrated help function
- Personalized settings
- Quick / moderate heating regulation functions
- Wi-fi enabled
- Danfoss Link™ App enabled
- Product number: 140F1135

**DEVIlink™ FT** – Floor Thermostat with sensor to control electric floor heating. Optionally also able to function as ON/OFF devices switching.

The DEVIlink™ FT is a device for switching heating elements and other electrically equipment ON/OFF. All communication in the DEVIlink™ System is wireless and of this reason very easy to install. When using DEVIlink™ FT as heating control, it is recommended to install the device with a floor sensor to ensure the required comfort and convenience. Optionally the DEVIlink™ FT is also able to be used as ON/OFF switch for other electrical equipment e.g. as electrical radiators, lights or other switching units.

- On/off switch
- Wireless connection to the DEVIlink™ CC Central Controller
- Floor sensor
- Load 230V ~ 15A/3450W
- Product number: 140F1137

**DEVIlink™ RS** – Room Sensor for precise measurement and setting of room temperature values. The DEVIlink™ RS – is a Room Sensor for precise measuring and setting of room temperature values, that shall be installed together with a DEVIlink™ FT to secure the required comfort and convenience. It is a battery operated device for measuring room temperature. High flexibility through free positioning

- Backlit display
- Built-in sensor for temperature measurement
- Display of set and actual temperature
- Timeless modern design
- 2 x AA batteries
- Warnings: 'low battery' and 'no signal'
- Product number: 140F1136

**DEVIlink™ RU** – Repeater Unit is used for extending the wireless transmission range between DEVIlink™ CC Controller, DEVIlink™ RS Room thermostats, DEVIlink FT and other devices in DEVIlink™ system. This may be necessary because of a weak radio link caused by widely spread installations, large distances, metal objects, special structural conditions, etc. The system supports up to three Repeater Units installed in a chain between the relevant DEVIlink™ Room thermostat and the DEVIlink™ CC Controller. More parallel chains of Repeater Units from a Controller are possible.

- For plug in
- Product number: 140F1138

## Danfoss Link™ App simply smarter heating

- Control heating from anywhere
- Includes heating control functionality from DEVIlink™ CC
- Simple and intuitive user interface
- Full home status at a glance
- High level of data security
- Available for Android and iOS

**See how simple it is to setup Wi-Fi on your DEVIlink system and how to pair it with the Danfoss Link™ App**
